

### Task 1

create a simple webpage that demonstrates the difference between three CSS position values:

sample output:

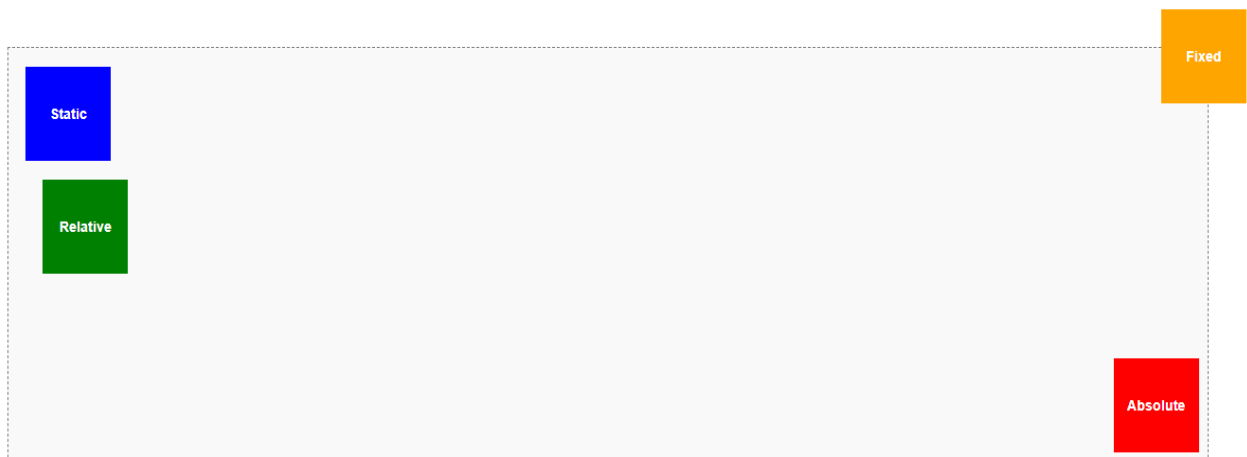

#### CSS Position Examples

### Task 2

Create a webpage using HTML and CSS to demonstrate different position properties. Inside a bordered container, add three boxes:

sample output:

### Task 3

Create two side-by-side containers with `position: relative`. Add `one absolute box` in each: one at the top-left in the first, and one at the bottom-right in the second. Label and style them with different colors using only HTML and CSS.

Sample output:
